

A **hyaluronic acid filler** is carefully injected under the skin to correct the lines and wrinkles

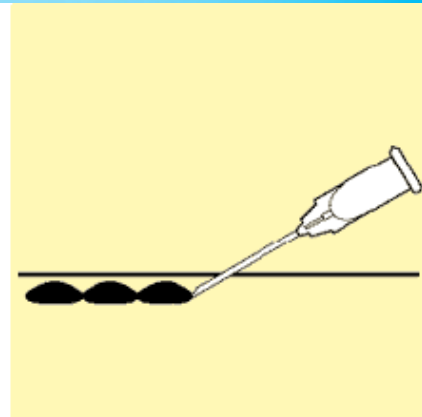

A **hyaluronic acid filler** attracts moisture, thereby restoring skin tone, elasticity and volume. As a result the appearance of lines, wrinkles and folds in the skin is significantly reduced

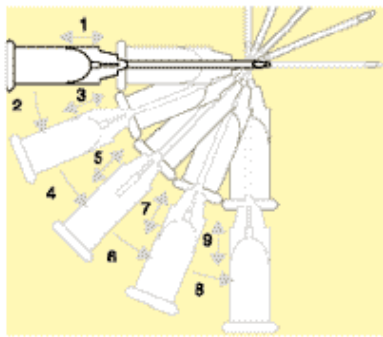

The choice of filler and the depth of injection depends on the severity of the line or wrinkle

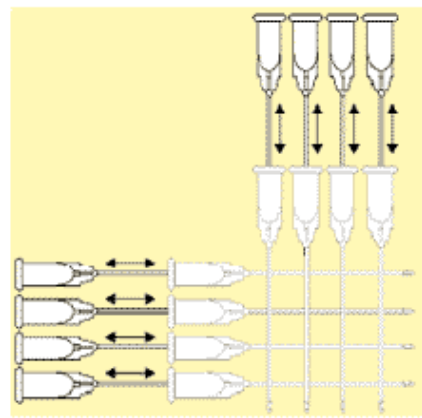

1. Linear threading technique

2. Serial puncture technique

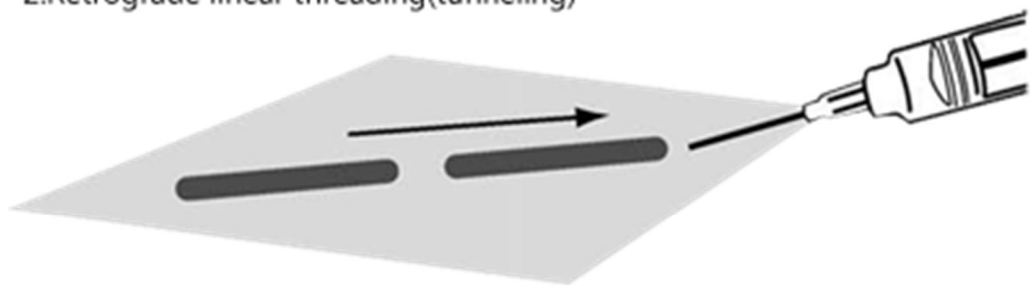

3. Fan technique

4. Cross-hatching technique

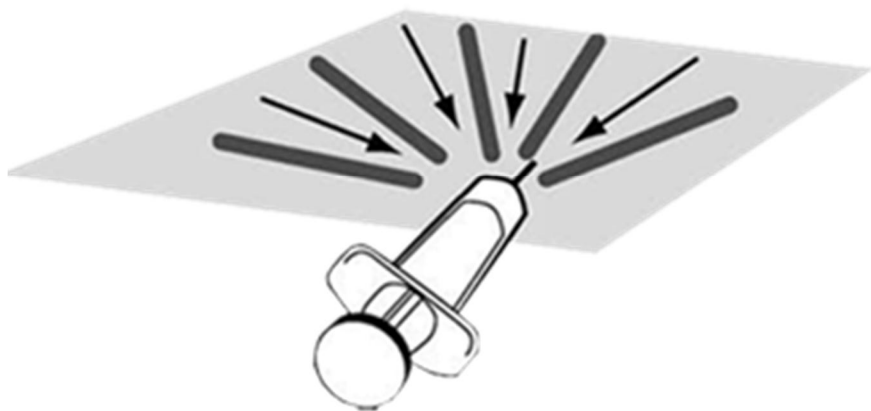

2.Retrograde linear threading(tunneling)

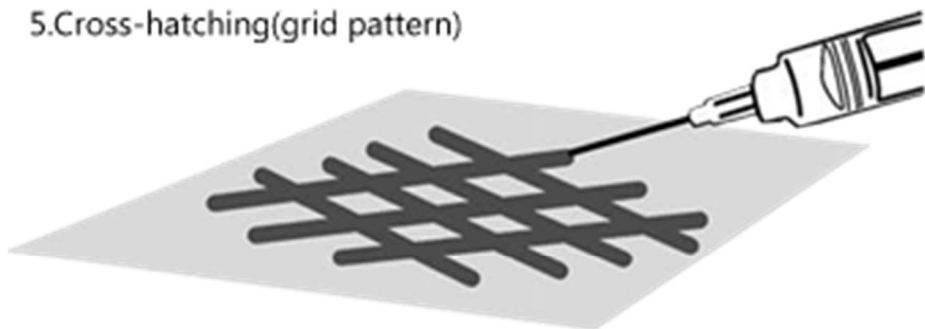

Direction of needle when injecting

4.Fanning

Arrows indicate direction of needle when injecting.

5.Cross-hatching(grid pattern)

Injections are retrograde and overlapping
